

Editor's Comment:

Thank you very much for sending me this request to evaluate the chapter with reference 2024/BPR/3276 for the book entitled Current Approaches in Engineering Research and Technology.

I analysed all the work with great care, and I noticed a few modifications to accommodate the reviewer remarks, but I could see that some issues were not resolved. The authors mention that they changed the manuscript, but no modifications were introduced:

- Improve the state of the art,
- Include a section on future scope,
- . Include more recent references and description on phonocardiogram analysis and wavelet transforms.

These are some examples. Thus, I recommend that the authors address these issues before publication. After these issues are addressed, I recommend publication of this book chapter.
