

Editor's Comment:

It is an interesting approach from an Econometric point of view, useful for those using different models in analyzing economic indicators and variables.

In this case, the objective was, of course, the inflation rate and what models are more suitable for this analysis in the Nigeria case.

Conclusions (at plural) is the correct form.

The References are wrongly written. The list is in alphabetical order of the authors' last names and, immediately after, the year of publishing. Thus, the first reference is Adetiloye K. A. (2010)...., Agboluaje et al. (2021)... and the last reference is Zako'ian J. M. (1994).....

The pos. 13 is the same as 28. Where names of institutions, put them at the respective letter: IMF, National Bureau of Statistics.

Respect the font of writing, 12 TNR.

OK for publishing after the corrections.
