PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	This manuscript offers critical contributions to sustainable agricultural practices in smallholder farming systems, particularly in Ghana, where groundnut production is a key livelihood activity. By presenting integrated strategies that address key challenges such as access to improved seeds, soil quality, and aflatoxin contamination, the study provides valuable evidence on the effectiveness of specific interventions like improved varieties, soil amendments, and integrated pest management. The findings not only highlight significant yield increases but also demonstrate how these practices can mitigate the risks of aflatoxin contamination, which is a major concern for food safety. The research's practical implications are important for the scientific community as they offer scalable solutions that can be adapted to similar agricultural contexts globally, while also addressing the barriers to technology adoption that limit the widespread dissemination of these practices.
