Book Name:	<b><u>New Visions in Medicine and Medical Science</u></b>
Manuscript Number:	<b>Ms_BP_3867G</b>
Title of the Manuscript:	<b>Utilization of Maternal Health Services in Western Ethiopia: A Community-Based Cross-Sectional Study</b>
Type of the Article	<b>Book chapter</b>

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment (If agreed with the reviewer, correct the manuscript and highlight that part in the manuscript. Authors must write his/her feedback here)</b>
Is the manuscript important for the scientific community? Please write a few sentences explaining your answer	This manuscript provides valuable data for public health researchers and policymakers working to improve maternal health outcomes in Ethiopia and potentially other developing countries.	
Is the title of the article suitable? Do you have any alternative Title in your mind?	Yes.	
Is the abstract of the article comprehensive? If your answer is No, please provide suggestions	Yes.	
Do you think the English quality of the article is suitable for scholarly communications? If your answer is No, please provide suggestions	Yes.	
Please provide your comments regarding the appropriateness of different sections of the manuscript.	The strengths of the study lie in its accurately reflective title, delineating its cross-sectional design and focus on maternal health service utilization in Western Ethiopia, alongside a robust introduction likely discussing the global maternal mortality burden and the significance of maternal health services. Methodologically, the research is expected to detail the study population, sample size, data collection methods, and analysis techniques. Results are anticipated to succinctly present findings, including data on antenatal care, skilled delivery rates, postnatal care, possibly stratified by rural and urban areas. The discussion section is likely to contextualize results, explore influencing factors, compare findings, and address the study's strengths and limitations. The conclusion should summarize key findings and their implications for public health policy and future research. Areas for improvement include providing more detailed abstract content, acknowledging limitations such as the inability of cross-sectional studies to establish causality, and offering recommendations for enhancing maternal health service utilization in the region. Overall, the manuscript suggests a well-structured investigation into a critical public health concern, although a comprehensive assessment would necessitate reviewing the entire document.	
Do you think that the references in the manuscript are proper, recent and sufficient? If you have any suggestions, please write here.	Yes.
