

Editor's Comment:

Regarding the above-sent paper:

1. In Conclusions (at plural), NO References inserted, because there are only author's ideas, opinions, point of views...

There is no need for a special sub-part regarding Implications.

2. References in the alphabetical order of last names of the authors. Therefore, the references added after Yang et al. (2020).. Mandatory to be inserted at the respective letters.

3. The paper to be written with TNR 12 and a quick English revision is recommended, because there are enough expressions and words underlined with red (in my copy), especially in the Conclusions part.

To underline the importance of Stocks Behaviors is essential in order to prevent a new medical crisis such that 4 years ago.

Ok for publishing after the corrections.
