

Editor's Comment:

The decision for the chapter "Advanced Thermal Performance Strategies for Air Conditioning Systems in Tropical Climates", to be published in the book "Science and Technology: Developments and Applications". I checked the process, and I could see that the authors improved the document based on the reviewers' comments.

There were two specific comments of the reviewer "Abd" that were left unattended, but the authors explained the reasons, and I believe that the chapter can be published in its current form. Thus, I recommend ACCEPTANCE of the chapter.
