Book Name:	<a href="#">Science and Technology: Developments and Applications</a>
Manuscript Number:	Ms_BPR_3938
Title of the Manuscript:	Technological Anxiety of Older Adults in Seeking Medical Attention: Concept, Current Status, and Influencing Factors
Type of the Article	Book chapter

**PART 1: Comments**

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	This is a very interesting topic that often have been overlooked because the older adults are the minority. The "fear" of technology among older adults is a universal problem that needs to solve in order to improve the technology adoption and usage. However, the author can improve on the "psychological" aspect of this problem as it was just briefly mentioned in microsystem factors. Suggest to include more psychological aspect (e.g., how does community influence the older adults? Subjective norm, etc.) as it will show a clearer picture.	
Is the title of the article suitable? (If not please suggest an alternative title)	Yes	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	Yes	
Is the manuscript scientifically, correct? Please write here.	The manuscript can be further improve with more literature review from different parts of the world (i.e., the East and the West). Does this issue affect them the same way? Suggest to elaborate further on the external system factor of the social ecology theory. What can the society (other than friends and family) do to help?	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form. =	As stated in the previous part, it is better to incorporate other references, as I believe more than 50% of the references are from China. It is better to include input from other nations in Asia as well, and more from the Western perspective so that we can see a clearer picture of the problem.	
Is the language/English quality of the article suitable for scholarly communications?	Suggest to use "older adults" and standardize the writing. There are places where elderly are used. The transition of the writing can be further improved by adding transitional words. There are some areas where the author jump to a completely new topic.	
<u>Optional/General</u> comments	None
